

# Marine & Transport Risk Consulting

## Loss Prevention for International Projects

Lars ter Veer

07.11.2018

"When it comes to transportation, the industry stops thinking!" \*

I agree - in terms of quality management looking at the efforts made for suppliers selection, procurement & production – compared to those for transport (if there are some...).

\*Professor for Production & Logistics, University for appl. Sc. of Cologne

# Transportation – A modular System

Whether a unique heavy lift shipment or a structured logistic operation model in a complex supply chain solution – any transport is a modular system.

And each module must fit to the others to ensure a successful transportation – and to protect the quality of the of the respective goods during transportation.

Because quality counts after transportation!

To achieve this we developed a systematic approach, cargo risk management programs

# (General) Systematic Approach to Cargo Risk Management

# Specific Topics (... Issues?) of International Projects

Stakeholders &  
Contracts?

Insurance:  
DSU? CAR?

Infrastructure &  
Routing to „green  
fields“?

Temporary  
Storage?

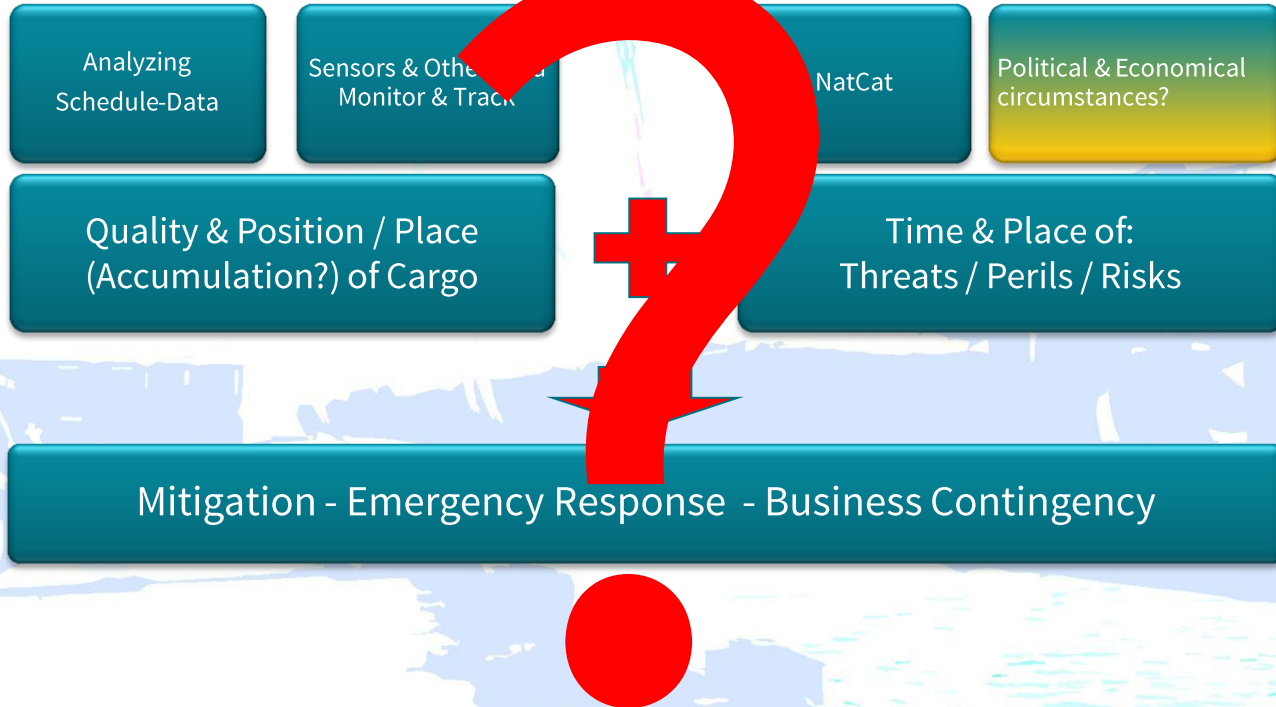

- Crime & Theft?
- Data Security (Cyber)?
- Political & economical  
circumstances?

## Specific / Individual Risk Management Actions:

- Frequent Meetings, Time Schedules, Updates
- Reporting lines, Distributors
- Warranties, MWS, MWS-Scope

Soil Condition  
(On- & Offshore)

# Outlook on “Digital” Support

# Life's what happens when we're making plans ...
